

RS480 V2 Reciprocating Sieve

“Automatic hand sieve for our standard wooden framed 480mmx480mm sieves”

The new design of the RS480 reduced the noise, makes the placing of the bins more easy and is better according to safety.

This sieve is to quickly separate doubles/blinds from good pellets during start and finish of the pelleting process (in order to be able to come close to 100% recovery i.e. 1.000.000 seeds will give 1.000.000 pellets).

Every now and then the operator will have a small portion of pellets that need to be ‘cleaned’ from dust/seed/doubles/blinds. Typically about 2-4 times, some 100 – 1500 gr. of pellets/seed/dust/doubles/blinds will have to be quickly sieved.

Standard equipped with:

- Imitates the old manual sieving movement and allows the operator to ‘quick screen’ small batches
- Easy ‘no bolt – no tool’ sieve exchange
- Minimal moving parts
- Simple design
- Easy and quick sieve cleaning guaranties seed lot integrity
- **Low noise due to our new technical design**
- **Easy bin placing and removing**
- **Moveable with a pallet car**
- **2 plastic buckets included**
- Standard 480mmx480mm sieves can be inserted to the machine

NEW DESIGN, less noise, improved bucket handling moveable with normal pallet car.

Due to major difference in requirements of the sieves (wooden frame 480x480) need to be ordered separate and built to spec. The standard is +/- 0.05mm tolerance measured with a measuring pin.

For further information contact:

Price and delivery time can vary significantly in relation to perforation required incl. tolerance, material to be used etc.

Specification	RS480
Dimensions	2430mmx600mmx1000mm
Power supply	3x400+N Vac 50Hz 0.37 kW 5 pin plug
Weight	Approx. 100kg

Optionally we have a Sieve Cart available for easy storage of all your RS480 sieves. Ask us for more information.
