

Seed Coating & Treatment Machinery

Rotary-6

Rotary seed treatment and coating equipment

6-inch drum

Applications

- Seed treatment
- Film Coating
- Build-up coating
- Pelleting

Target

- Research samples
- Trial seed samples
- Ability to duplicate production scale treatments

Rotary-6 Shown with Option 3-Timer System & Foot Pedal

Example capacity for seed treatment / coating (capacity for selected crops):

- **Broad acre crops = 50g up to 250g per batch**
- **Horticulture crops = 10g min batch – 200g per batch**

Advantages

- Basic control on / off
- Variable rotor speed selection
- Specially designed for easy scale-up
- Light inside coating chamber for visibility

Product Description

- 6-inch drum, rotary seed treatment /coating equipment.
- Basic control on /off
- Variable rotor speed selection
- Side discharge door
- Light inside coating chamber for visibility
- Available 110 volt 60 hz / 220 volt 50 hz single phase

Standard Equipment

- Rotor / Stator
- Manual loading of seed
- Manual liquid dose system
- Light inside coating chamber for visibility

Optional Equipment

- Peristaltic pump for precise application of slurry treatment
- PLC, 3-Timer system; control of pump, coating cycle, discharge door
- PLC, Seed count option, entry of seed count for control of liquid pump system
- Foot pedal for starting coating sequence
